MISSION

1. Understanding the importance of creating critical evaluator thinking, the curriculum committee of Royal Dental College decided to introduce a research-based curriculum exclusively for our college which would make every student develop a research attitude of believing things over their experience alone, not misguided by any other external influences. This curriculum was named RECLine shortened from the words of Research, Evidence, and Clinical, it was aimed at making every student do a research project on the subjects they study each year and to feel the evidence of its research conclusion achieved and to understand its clinical implication.
2. These incubation centers enable undergraduate and postgraduate students to nourish their knowledge in research methodology during the entire course of the study by conducting seminars and workshops.
3. It also provides excellent opportunities for interdisciplinary research activities among students and the faculties to understand and comprehend the latest trends in the research areas of their respective specialties.
4. Further promotes revolutionary changes in the field of dentistry and thereby publishing the research works to foster innovations, and gain advancements in the related field of health care to serve mankind.

JOURNAL OF ROYAL DENTAL COLLEGE

The short studies or other research works undertaken by the undergraduate and postgraduate students of the institution were published in the Institutional Journal on January 2023.
